RUDOLFH LABAY MAZON

Full-Stack Developer | 3+ Years Experience | Open to Remote & International Roles | Available Immediately

rgmazon@gmail.com | +63-952-475-4587 | linkedin.com/in/rgmazon | rgmazon.pages.dev | github.com/rgmazon

PROFESSIONAL SUMMARY

Full-Stack Developer with 3+ years shipping production web apps in **React, Next.js, Laravel, and MySQL** — with a consistent track record of measurable performance gains, including Google Lighthouse scores improved from ~20 to 90+ and reduced render-blocking load times. Experienced across the full lifecycle: legacy system migrations, REST API design, third-party integrations, and cloud deployment (Vercel, Cloudflare, Cloudways). Seeking junior-to-mid-level remote opportunities.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, PHP, HTML5, CSS3
- **Frontend:** React.js, Next.js, Tailwind CSS, Bootstrap, Vite
- **Backend:** Node.js, Laravel, PHP, REST API Development
- **Databases:** MySQL, PostgreSQL, Supabase (incl. PostGIS, RLS)
- **Tools:** Git, GitHub, Figma, npm/pnpm, Chrome DevTools, Docker
- **Cloud & Deploy:** Vercel, Cloudflare Pages, GitHub Pages, GCP (VM), Cloudways

PROFESSIONAL EXPERIENCE

Full-Stack Developer — Freelance Contract (Concurrent, Part-Time) *Mar 2026 – Apr 2026*

Tech: *HTML, CSS, JavaScript, Node.js, WordPress, Cloudways, Meta Pixel, Everflow, Jornaya, TrustedForm, Firebase, RedTrack*

- Rebuilt WordPress-based marketing funnel sites with custom-coded solutions, boosting Google Lighthouse performance scores from ~20 to 90+.
- Migrated 3 lead-generation websites from GoDaddy to Cloudways, cutting average response time from 3s to 1s improving deployment reliability.
- Integrated and configured a six-tool tracking stack (Meta Pixel, Everflow, Jornaya, TrustedForm, Equifax, Microsoft Clarity) for accurate lead attribution, giving the client visibility for the first time.
- Conducted end-to-end QA across authentication flows (Firebase OTP) and third-party form submission pipelines, catching failed verifications before launch.
- Produced technical documentation and deployment guides to enable seamless team handoffs.

Full-Stack Developer — Fliquey Media Entertainment *Feb 2025 – Mar 2026*

Tech: *Laravel, Bootstrap, MySQL, Smarty, React.js, JavaScript, Tailwind CSS, WordPress*

- Led the frontend migration of a Laravel/PHP streaming platform from legacy PHP/Smarty templates to modular React.js components, improving maintainability and setting the pattern for future feature development.
- Developed messaging, content management, and engagement features across a Laravel/PHP streaming platform and a separate PHP/MySQL social platform, working full stack on both. Built an admin leaderboard dashboard giving management real-time visibility into user registrations, engagement, and revenue — used to track 2000+ users/records.
- Optimized newsfeed performance through asynchronous video loading and caching, reducing render-blocking requests and cutting load time by 80%.
- Authored and maintained internal REST API documentation, enabling frontend and mobile teams to integrate independently without back-and-forth clarification.

Full-Stack Developer — blaseek *May 2024 – Jan 2025*

Tech: *React.js, Vite, Tailwind CSS, PHPMailer, EmailJS, Figma*

- Designed and launched a production React/Vite website from scratch, replacing a legacy static site with a component-based architecture built for faster iteration and easier maintenance.
- Cut page load times through code splitting, build optimization, and WebP image delivery which improved Lighthouse score from 40 to 90.
- Migrated contact form infrastructure from PHPMailer to EmailJS, eliminating dropped submissions during traffic spikes, or silent delivery failure, and giving the client reliable visibility into lead inquiries.
- Built a reusable React component library that became the standard for new feature work, reducing the time to ship new UI from roughly halving frontend build time on subsequent features.

Full-Stack Developer — Freelance *Aug 2022 – May 2024*

Tech: *WordPress, PHP, MySQL, React.js, Bootstrap, Tailwind CSS, JavaScript*

- Designed and delivered 5+ custom web applications and business websites for small business clients in the BPO and solar installation industries, handling the full build from database schema to deployment.
- Built backend systems — form processing, database storage, admin dashboards — that gave clients a single place to manage customer inquiries, replacing spreadsheet-based workflows.
- Delivered responsive, SEO-friendly landing pages, helping clients rank locally.
- Improved site performance through image optimization, caching, and frontend refactoring, cutting load times noticeably enough to matter for SEO/UX.

Front-End & Database Developer — Internship *Sep 2023 – Jan 2024*

Tech: *HTML, CSS, JavaScript, PHP, Bootstrap, Figma, GitHub, MySQL*

- Built a records management system that replaced manual physical record searches with a searchable digital archive, letting staff upload scanned records and retrieve them by category, name, or case number.
- Optimized the MySQL database schema and added indexing on key search fields to keep retrieval fast as the record archive grew in size.
- Developed reusable UI components deployed across multiple government administrative modules, reducing duplicate frontend work on future modules.

PERSONAL PROJECTS

Follo — Job Application Tracker https://follo-phi.vercel.app

Tech: *Next.js, TypeScript, Supabase (PostgreSQL), Supabase Auth, Tailwind CSS, Vercel*

- Built a full-stack application enabling job seekers to track applications, recruiter contacts, and hiring pipeline progress.
- Implemented secure authentication and per-user data isolation using Supabase Auth and PostgreSQL Row Level Security (RLS).
- Created automatic activity logging via PostgreSQL triggers, generating timestamped records on application status changes.
- Developed Next.js middleware for server-side route protection and session validation.

Grave Locator — Geospatial Web App https://grave-locator.pages.dev

Tech: *React.js, Supabase (PostgreSQL + PostGIS), Mapbox GL JS, Tailwind CSS, Vite, Cloudflare Pages*

- Built a map-first geospatial web app for locating and submitting graves via an interactive Mapbox interface.
- Stored and queried geospatial coordinates using PostgreSQL with the PostGIS extension.
- Implemented a moderation workflow requiring admin approval for all public submissions and edits.
- Developed an admin dashboard for reviewing, approving, and rejecting user submissions.

NLNP-PAMO Online Permit Management System

Tech: *PHP, MySQL, Bootstrap, dompdf*

- Designed and built a permit management platform replacing manual paper-based workflows.

- Implemented automated PDF permit generation using dompdf, triggered by application status updates.
- Developed a real-time admin dashboard for tracking permit processing across departments.

EDUCATION

Bachelor of Science in Information Systems *Jan 2020 – Jun 2024*
Specialization: Systems Design and Web Development — City College of Calapan
